## (54) THERMOPLASTIC ELASTOMER COMPOSITION

## (57)Abstract:

PROBLEM TO BE SOLVED: To provide a new and inexpensive thermoplastic elastomer composition used for a noncoated airbag cover having 40-98 spring hardness without requiring a reinforcing nylon-based net in the airbag cover.

SOLUTION: Flexibility and moldability are improved and a unit cost of the material is reduced by including (a) component of a styrene-based elastomer known as a hydrogenated block copolymer and especially having ≥70,000 number-average molecular weight as a main component and adding and alloying (b) component of a ethylene/ $\alpha$ -olefin copolymer therewith. Flexibility and moldability are improved by adding and alloying (c) component of a paraffinic oil therewith. Developability at a high and a low temperature, damage resistance and moldability are improved and a unit cost of the material is reduced by adding and alloying (d) component of a copolymer of propylene and a 2-8C  $\alpha$ -olefin and (e) component of a propylene-based thermoplastic elastomer therewith. Damage resistance, stickiness and releasability when subjected to injection molding are improved by adding (f) component of a silicone oil having ≥ 50,000 cSt viscosity thereto.

## **LEGAL STATUS**

[Date of request for examination]

13.06.2005

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]
